

CentiMark Services You May Not Know About

CentiMark is North America's leading commercial roofing and flooring contractor. But did you know that we also offer a variety of other products and services like Metal Roof and Siding Installation, Power Washing, Roof Cleaning and Interior and Exterior Spray Polyurethane Foam?

Metal Roofing & Siding

Metal roofing and siding are increasing in popularity because of the many advantages they offer over shingles and other roofing materials. These benefits include:

- Aesthetic enhancement of the facility
- Thousands of color combinations
- Virtually maintenance free
- Great life cycle cost value
- Outstanding long-term performance in all climates
- Unique profiles and architectural accents
- Insulated and uninsulated roof and wall panels
- Integrated window or skylight options

CentiMark is leading the way with metal roof and wall panel installations throughout North America. We have performed thousands of installations for our customers. Job profiles and references are available upon request. Our crews are uniformed, drug tested and well versed in the required safety procedures associated with metal roof and wall panel installations.

Metal Roof Panels Over Existing Shingles

Our CentiMark associates are highly experienced in retrofitting existing shingle roof systems with attractive metal alternatives. Installing a metal roof system over your existing shingles can save you money and reduce waste in landfills. Additionally, you will receive the many benefits that metal roof systems have to offer while completely changing the look of your existing building.

Interior & Exterior Spray Polyurethane Foam

Spray Polyurethane Foam (SPF) adds a seamless, monolithic, uniform barrier of protection against water and air infiltration. SPF roof systems have excellent adhesion properties and are ideal in areas where wind uplift is a concern. SPF is highly energy efficient and can be sprayed in varying thicknesses to reach insulating requirements. There are a variety of coatings available for SPF that aid in system performance and reflectivity.

CentiMark is North America's largest Spray Polyurethane Foam applicator. Since foam roofs are very sensitive in nature, it is very important to utilize a contractor, like CentiMark, with extensive SPF application experience.

General Roof Cleaning & Power Washing

To prolong the life of a roof, regular cleaning is very important. CentiMark associates are trained to use the right cleaning agents, water temperatures/pressures and equipment to clean the roof thoroughly without damaging the roof system. Our services remove dirt, moss and algae from the roof surface, as well as general debris from drain strainers and gutter systems. We also have the capabilities to properly and safely clean and protect the exterior of your building, removing discoloration caused by the elements.
